Questions:

How easy is the app interface?
Are all the features accessible?
What suggestions would you provide to improve the application?
Was it easy to identify the application on the Home Screen?
Which of the logos do you prefer.

Responses and Participant Feedback:

Participant 1:

The app interface is easy and seems to be laid out in a very straightforward way, such that someone with minimal knowledge of mobile applications could definitely find their way around.

Yes, all of the features look easily accessible and in where I would expect them to be.

The messages tab looks a little bit awkward, it perhaps needs a "Send a quick message" header or something similar.

Yes, I could easily identify it.

Flat Icon.

Participant 2:

Easy to use and pretty intuitive. The headings were pretty clear

Yes, they seem accessible and it's easy to reach if I'm using only one hand.

The smaller text seemed a bit cluttered and difficult to read.

Yes, it stood out pretty well due to the white background.
